

I love the XM radio traffic and weather channel for Phoenix. The regular radio stations do not come close to comparing to what XM radio offers. I get off work after 6:00 p.m. The local radio stations have not traffic reports then. I turn on my XM traffic and radio station, I get instant results and information on which route to take home and the same for going to work in the morning. I do not enjoy listening to regular radio stations, I hate their disjockeys, the idle chit chat over nothing of importanace, just tyring to fill in their time slots without music, so I turn the regular radio off. I never turn my XM radio off. I love to listen to my XM radio, I love the traffic and weather channel for Phoenix. XM radio has a right to have these channels to offer to the public. If the regular radio is so threatened by them, then the regular radio stations need to be improved drastically on what they have to offer the public. I choose to pay for the XM radio, therefore, I should be entitled to have the local traffic, weather and music I want to listen to. XM Radio is just giving the regular radio stations stiffer competition and making regular radio perform better than what it does. Please reject the NAB's petition 04-160.
